

Ireland - South Coast

Coverage Diagram

5622	Chart Title	Natural Scale 1:
1	Tuskar Rock to The Bull	500,000
2	Waterford to Ballycotton Bay	150,000
3A	Entrance to Waterford Harbour	25,000
3B	Dunmore East Harbour	5,000
4A	Passage East to Beacon Quay and Pink Point	25,000
4B	Continuation of River Barrow to New Ross	25,000
4C	Continuation of Queen's Channel to Waterford	25,000
4D	New Ross	10,000
5	Dungarvan Harbour	15,000
6	Youghal	12,500
7	Ballycotton Bay to Glandore Bay	150,000
8	The Sound and Ringabella Bay	12,500
9	Outer Approaches to Cork Harbour	50,000

5622	Chart Title	Natural Scale 1:
10	The Sound to Spike Island	12,500
11	Cobh Road and West Passage	12,500
12A	Upper Harbour West	12,500
12B	Continuation of Upper Harbour West	12,500
13	Upper Harbour East	12,500
14	Morris Head to Old Head of Kinsale	50,000
15	Oyster Haven	12,500
16	Kinsale	12,500

Notes

Positions are referred to the WGS84 compatible datum, European Terrestrial Reference System 1989 Datum

Depths are in metres and are reduced to Chart Datum, which is approximately the level of Lowest Astronomical Tide.

Heights are in metres. Underlined figures are drying heights above Chart Datum. Overhead clearance heights are above Highest Astronomical Tide. All other heights are above Mean High Water Springs. Navigational marks: IALA Maritime Buoyage System-Region A (Red to port)

DATUM

All the charts are referred to the WGS84 compatible Datum ETRS89. Any positions taken from GPS (referred to WGS84) or from ADMIRALTY Notices to Mariners (referred to ETRS89) can be plotted directly on all charts.

CHART ACCURACY

Owing to the age and quality of the source information, some detail on this chart may not be positioned accurately. Particular caution is advised when navigating in the vicinity of dangers, even when using an electronic position fixing system such as GPS.

OIL AND GAS FIELDS

Production platforms and associated structures, including tanker moorings, storage tankers and platforms on pipelines, generally exhibit Mo(U) lights, aircraft obstruction lights and audible fog signals. Unauthorized navigation is prohibited within 500 metres of all such structures.

GAS FIELD DECOMMISSIONING

Production platforms and associated structure in the areas indicated are currently being decommissioned. During the works, aids to navigation may be unreliable and certain features may not be as shown. Consult local notices to mariners issued by the gas operator for details of decommissioning progress.

MARINE FARMS

Marine farms exist within the area of this chart. They may not all be shown individually and their positions may change frequently. Marine farms may be marked by lit or unlit buoys or beacons. Mariners are advised to avoid these structures and their associated moorings.

OVERHEAD CABLES

Overhead cables may conduct high voltages; contact with or proximity to these poses extreme danger. Sufficient clearance must be allowed

OMISSION OF DETAIL

Within the limit marked _____ and the coastline, this chart should only be used for planning purposes as features such as depths, platforms, wrecks, pipelines, minor aids to navigation and cables have been omitted. Larger scale ADMIRALTY charts are available for mariners intending to navigate in this area.

VESSEL REPORTING

For details of the Cork Port Operations and Information Service, see ADMIRALTY List of Radio Signals.

WETREP

Tankers of more than 600 dwt carrying heavy crude oil, heavy fuel oil or bitumen and tar and their emulsions are required to participate in the Western European Tanker Reporting System (WETREP). See ADMIRALTY List of Radio Signals for further details

SHELLFISH BEDS

Vessels should avoid grounding in areas of shellfish beds.

HISTORIC WRECKS

The sites of historic wrecks are protected from unauthorised interference.

SUBMARINE CABLES AND PIPELINES

Mariners should not anchor, trawl or engage in seabed operations in the vicinity of submarine cables and pipelines. Submarine cables support national infrastructure; damage to them may affect critical services and can result in serious consequences, as well as creating a potential hazard to mariners. Wilful or neglectful damage to a cable may result in legal action. Pipelines are not always buried and their presence may significantly reduce the charted depth. They may also span seabed undulations and cause fishing gear to become irrecoverably snagged, putting a vessel in severe danger.

HIGH SPEED CRAFT

High speed craft operate in the area of this chart. Mariners are advised to maintain a good lookout. Some high speed craft generate large waves, which can have a serious impact on small craft and their moorings close to the shoreline and on shallow off-lying banks.

HM Coastguard Services and Safety Information

VHF MARITIME RADIO

Coastguard Maritime Rescue Co-ordination Centres are on constant watch on Channel 16 - the distress, safety and calling channel. Initial calls should normally be on Ch 16.

HM COASTGUARD BELFAST (MRCC)

Tel: +44 (0)2891 463933

MMSI: 002320021

Email: zone34@hmcg.gov.uk (FAO Belfast Coastguard)

MARITIME SAFETY INFORMATION

Maritime Safety Information (MSI) in the UK is broadcast by: BELFAST COASTGUARD at 0210, 0510, 0810, 1110, 1410, 1710, 2010 and 2310. FALMOUTH COASTGUARD at 0110, 0410, 0710, 1010, 1310, 1610, 1910 and 2210. HOLYHEAD COASTGUARD at 0150, 0450, 0750, 1050, 1350, 1650, 1950 and 2250. MILFORD HAVEN COASTGUARD at 0150, 0450, 0750, 1050, 1350, 1650, 1950 and 2250. These will include gale warnings, local inshore forecasts and navigational warnings. Mariners should listen to the MSI announcement on VHF Channel 16 for details of the working channel to be used for the broadcast.

MSI for Ireland is broadcast by: DUBLIN COAST GUARD Forecasts for Irish coastal waters and Irish Sea at 0103, 0403, 0703, 1003,1303, 1603, 1903 & 2203.

Gale warnings for Irish Coastal Waters and Area Irish Sea at 0033, 0633, 1233 and 1833. Small Craft Warnings for Irish Coastal waters are broadcast at 0033, 0633, 1233 and 1833. Navigational Warnings are broadcast at 0033, 0433, 0833, 1233, 1633 and 2033. VALENTIA COAST GUARD broadcasts forecasts for Irish coastal waters and Irish Sea at 0103, 0403, 0703, 1003, 13031603, 1903 and 2203.

Weather synopsis and forecast for Sea Areas Shannon and Fastnet at 0833 2033. Gale warnings for Irish Coastal waters and Area Irish Sea at 0033 0633 1233 and 1833. Gale warnings for Area Shannon and Fastnet are broadcast at 0303, 0833, 0903, 1503, 2033 and 2103.

Small Craft Warnings for Irish Coastal waters are broadcast at 0033, 0633, 1233 and 1833 if winds above Force 6 are expected offshore.

Navigational Warnings are broadcast at 0233, 0633, 1033, 1433, 1833 and 2233.

For full details of all relevant MSI broadcasts, please refer to ADMIRALTY List of Radio Signals Volume 3(1).

Distress and Safety Communication

Distress - Urgency

A Distress or Urgency message has absolute priority. Make a call on VHF Channel 16 and give the following essential information:

Distress Call MAYDAY MAYDAY MAYDAY

- Name and Call Sign and MMSI number
- Position
- Nature of Distress
- Type of assistance required
- Type of boat number of crew intentions

Urgency (eg. if you break down in bad weather or a crewman requires medical attention) Call **PANPAN PANPAN PANPAN** and give:

- Name and Call Sign and MMSI number
- Position
- Nature of Distress
- Type of assistance required
- Type of boat number of crew intentions

Other Distress Signals

Other recognised signals are:

- Red flares (parachute, multi stars or hand held)
- Orange smoke signal
- The flag signal NC
- The morse signal SOS ... --- ... by light
- An article of clothing on an oar
- Slowly and repeatedly raising and lowering outstretched arms
- A square flag with anything resembling a ball above or below it
- Continuous sounding of a siren or whistle will also be recognised, or smoke and flames from the vessel
- The carriage of an Emergency Position Indicating Radio Beacon (406 EPIRB) will improve your chances of being located if conventional means fail. 406 EPIRBs are detected by satellite, in addition to aircraft, and transmitted to a Coastguard Maritime Rescue Co-ordination Centre.

THE USE OF MOBILE TELEPHONES IN DISTRESS AND SAFETY COMMUNICATIONS

The use of mobile telephones in the marine environent offshore is now well established, with users in all areas of the commercial, fishing and leisure communities.

Incidents have occured where vessels requiring assistance from rescue services have used the inland emergency service, or alternatively telephoned direct to request assistance. (e.g. Lifeboat services). This procedure through a mobile telephone is **strongly discouraged**.

Use of mobile telephones by-passes the existing dedicated well-established international marine distress communications systems.

Mobile telephone coverage offshore is limited and does not afford the same extensive safety coverage as VHF Channel 16. Consequently a greater risk exists of communications difficulties or even a complete breakdown if an accident should occur at the edge of a cell coverage area.

Subsequent on-scene communications would be restricted and delayed if mobile telephone communications were exclusively maintained throughout. There is always a risk that elements of vital information could be lost or misinterpreted by the introduction of further relay links in the communication chain. Mobile telephones are also highly susceptible to failure due to water ingress.

It is not possible to communicate direct to another vessel able to render assistance unless that vessel is also fitted with a mobile telephone and the telephone number is known. Requests for assistance cannot be monitored by other vessels in a position to render assistance. Valuable time would be lost whilst the relevent Coastguard Rescue Coordination Centre receives and then re-broadcasts the information to all ships on the appropriate distress channel(s).

In the interests of Safety Of Life At Sea (SOLAS), owners of vessels are urged to carry MARINE communications equipment onboard and to use this medium as the primary means of Distress and Safety communications.

Product Specifications

PRODUCT USAGE CAUTION

This product is specifically designed, in conjunction with other charts and publications, as an aid to the navigation of leisure craft and locally regulated workboats and fishing vessels and therefore should be used by competent (preferably qualified) maritime navigators. Although this product contains the best information available at the time of publication, the user should navigate with caution, particularly in areas of shallow or confined waters where the depth of water is likely to change due to local conditions. The information provided in this product comes from the latest source information held and is updated by Notice to Mariners upon receipt of new information critical to safe navigation. To help maintain this product for all users, users are asked to notify the United Kingdom Hydrographic Office of any differences found between what is depicted and actual conditions encountered.

KEEPING THIS CHART UPDATED

Updates for the charts are published using the Notices to Mariners Service on the ADMIRALTY Notices to Mariners page found on our website at admiralty.co.uk/msi. All updates for the latest edition of the chart are listed and can be quickly and easily downloaded. All the charts are derived from standard ADMIRALTY charts. No updates are applied to the charts by the United Kingdom Hydrographic Office or its agents after printing. For those who do not have internet access, please contact Tel. 01823 484444 for assistance.

PROVIDE UPDATED INFORMATION

To help maintain this product users are asked to notify the United Kingdom Hydrographic Office of any differences found between what is depicted and actual conditions encountered. Users can do this by submitting a Hydrographic Note form, found on our website admiralty.co.uk/msi or by downloading our H-Note App. The H-Note App is freely available to download on Android and iOS devices. For more information please see here:

IMPROVEMENTS TO THIS PRODUCT

ADMIRALTY Small Craft Charts are designed for use on leisure craft and locally regulated workboats and fishing vessels, where the smaller format charts fit more conveniently into the limited space available. Users with specific suggestions for the improvement of this product or ideas for the expansion of the series are requested to forward their comments to:

Customer Services, The UK Hydrographic Office, Admiralty Way, Taunton. +44(0)1823 484444 E-mail customerservices@ukho.gov.uk

Tidal Curve Diagrams

COBHMEAN SPRING AND NEAP CURVES

Springs occur 2 days after New and Full Moon

For guidance on the use of Standard Curve Diagrams, see ADMIRALTY Tide Tables NP 201.
